Driving forces
Innovation and human capital are closely intertwined sustainability aspects for the software industry. The industry is characterized by rapid technological innovation, which demands a highly qualified, innovative workforce to identify disruptive trends and develop new products. Managing, training and developing employees is therefore crucial for profitability and growth. Customer loyalty and retention are also key drivers for long-term profitability. Furthermore, companies must ensure data security. As a growing amount of confidential data is processed and stored, governments are showing an increasing interest in legislating data privacy. On the consumer side, data security and privacy issues are starting to affect users’ choices. Environmental footprint has not traditionally been seen as a critical issue for the software industry, but energy use is a future source of scrutiny as data centers require a constant supply of energy to avoid disruption.

Highlighted criteria & Dimension weight
Economic Dimension .................. 52%
  – Customer Relationship Management
  – Innovation Management
  – IT Security & System Availability
  – Privacy Protection
